Serial No. 10/571,057

IN THE CLAIMS:

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with <u>underlining</u> and deleted text with <u>strikethrough</u>. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

Please AMEND claims 1-10 in accordance with the following:

1. (Currently Amended) A wheel support bearing assembly for rotatably supporting an automotive wheel relative to a vehicle body structure, which assembly comprises comprising:

an outer member having an outer periphery formed with a flange and also having an inner periphery formed with raceway surfaces;

an inner member formed with raceway surfaces confronting the associated raceway surfaces in the outer member;

double rows of rolling elements interposed between the raceway surfaces in the inner member and the raceway surfaces in the outer member, respectively; and

a sealing unit forto sealing opposite open ends of an annular bearing space delimited between the outer and inner members;

wherein the inner member includes a hub axle formed with one of the raceway surfaces and a wheel mounting flange; and

wherein the angle of fiber flow relative to at least one of the raceway surface in the hub axle and the raceway surfaces in the outer member is chosen to be equal to or smaller than 15°.

2. (Currently Amended) A wheel support bearing assembly for rotatably supporting an automotive wheel relative to a vehicle body structure, which assembly comprises comprising:

an outer member having an inner periphery formed with raceway surfaces;

an inner member formed with raceway surfaces confronting the associated raceway surfaces in the outer member;

dual rows of rolling elements interposed between the raceway surfaces in the inner member and the raceway surfaces in the outer member, respectively; and

a sealing unit forto sealing opposite open ends of an annular bearing space delimited between the outer and inner members;

wherein the inner member includes a hub axle formed with one of the raceway surfaces

Serial No. 10/571,057

and a wheel mounting flange; and

wherein the angle of fiber flow relative to the raceway surface in the hub axle is chosen to be equal to or smaller than 15°.

3. (Currently Amended) A wheel support bearing assembly for rotatably supporting an wheel relative to a vehicle body structure, which assembly comprises comprising:

an outer member having an outer periphery formed with a flange and also having an inner periphery formed with raceway surfaces;

an inner member formed with raceway surfaces confronting the associated raceway surfaces in the outer member;

dual rows of rolling elements interposed between the raceway surfaces in the inner member and the raceway surfaces in the outer member; and

a sealing unit forto sealing opposite open ends of an annular bearing space delimited between the outer and inner members;

wherein the angle of fiber flow relative to each of the raceway surfaces in the outer member is chosen to be equal to or smaller than 15°.

- 4. (Currently Amended) The wheel support bearing assembly as claimed in Cclaim 1, wherein the other of the raceway surfaces of the inner member is formed on an inner race segment that is mounted on an outer periphery of one end of the hub axle.
- 5. (Currently Amended) The wheel support bearing assembly as claimed in Cclaim 2, wherein the other of the raceway surfaces of the inner member is formed on an inner race segment that is mounted on an outer periphery of one end of the hub axle.
- 6. (Currently Amended) The wheel support bearing assembly as claimed in <u>Cc</u>laim 3, wherein the inner member includes two inner races having respective raceway surfaces confronting the raceway surfaces provided in the outer member.
- 7. (Currently Amended) The wheel support bearing assembly as claimed in Cclaim 1, wherein the hub axle is made of a bearing steel or a carburized steel or a carbon steel having a carbon content within the range of 0.4 to 0.8%.
 - 8. (Currently Amended) The wheel support bearing assembly as claimed in Cclaim 2,

Serial No. 10/571,057

wherein the hub axle is made of a bearing steel or a carburized steel or a carbon steel having a carbon content within the range of 0.4 to 0.8%.

- 9. (Currently Amended) The wheel support bearing assembly as claimed in Cclaim 1, wherein the outer member is made of a bearing steel or a carburized steel or a carbon steel having a carbon content within the range of 0.4 to 0.8%.
- 10. (Currently Amended) The wheel support bearing assembly as claimed in Eclaim 3, wherein the outer member is made of a bearing steel or a carburized steel or a carbon steel having a carbon content within the range of 0.4 to 0.8%.
